

## Carriage Rollers

Carriage Rollers - Carriage rollers are especially designed bearings which are used on lift masts to be able to help them work in tough environmental surroundings. Lift masts are normally subjected to shocks, oscillations, high dynamic and vibrations and static loads. This apparatus is often exposed to environmental influences like for instance heat, dust, cold, aggressive ambient air, moisture and contamination. Thus, the lift masts' guidance arrangements should be specifically tough and have a particular high load carrying capability.

Carriage rollers have been created as the solution for working in different environmental surroundings. These bearings are the solution where the guidance arrangements of the lift masts should be cost-effective and maintain operational security while having the ability to handle a particularly high load carrying capacity.
